

COREA

Suppose we have added a wrapper flop for EDT channel, then value from edt-channel.in is NOT going into the decoup.

So we should NOT add wrappers to

if we add a wrapper flop to the *ijtag* ports :-

for eg,

if we add a wrapper flop to the *ijtag-si*, then *SIB-ST1* is NOT getting its value from *ijtag-si*.

|||ly for clocks

In general, test ports should not be disturbed.

So we don't add wrappers for test ports.
