

JUNTRAN

- o why need DFT
- o flow of DFT
- o What is scan insertion
- o Types of scan
- o Which method u using in ur design
- o flow of scan
- o i/p and o/p of scan
- o DRC of scan
- o scan cell reorder
- o explain domain mixing
- o how u avoid bus contention violation
- o explain edt decompressor and compressor logic
- o atpg flow
- o what is sdc file contains
- o what is multicycle and false path
- o i/p and o/p of atpg explain what it contains
- o how u analysis the fault coverage
- o how u ll improve the test coverage
- o difference between parallel and serial patterns
- o i/p and o/p of simulation explain
- o what u ll do in simulation
- o how u analyse the miss match simulation
- o explain MBSIT architecture
- o explain occ
- o what is hold,setup,skew,slack?
- o difference between sequential and combinational atpg

- o Fault class of atpg
- o Explain loc, los
- o Which one mostly using and y
- o Why need 2 pulses need for TDF and one pulse for SA
- o Explain why frequency less for dft rather than functional and how u generating less frequency from occ
- o Patterns for SA for AND gate.
